Professional Summary

Computer Science undergraduate at NIT Durgapur with internship experience in full-stack web development (MERN Stack) and SAP enterprise development (ABAP, CDS Views, OData, BTP). Proficient in building scalable RESTful APIs and real-time systems using JavaScript, TypeScript, and Python; experienced in Agile/Scrum, OOP, unit testing, and version control workflows.

Education

National Institute of Technology, Durgapur **Aug 2023 – May 2027**
Bachelor of Technology in Computer Science and Engineering | CGPA: 6.51/10 *Durgapur, West Bengal*

Experience

Accenture **May 2026 – July 2026**
Custom Software Engineering Associate Intern *Bengaluru, Karnataka*

- Engineered and optimized 10+ enterprise ABAP programs on SAP BTP using Eclipse ADT, leveraging OO-ABAP principles, Open SQL, and modular design patterns to eliminate code duplication and boost reusability across critical business workflows.
- Architected high-performance CDS Views and AMDP functions for HANA-native data processing, accelerating complex query execution; diagnosed and resolved production-impacting bugs through systematic root-cause analysis and managed end-to-end transport orchestration across DEV, QA, and PRD landscapes.
- Delivered production-ready OData service implementations consumed by SAP Fiori UIs via the RAP framework, streamlining service binding on BTP and enabling seamless, type-safe front-end data integration.
- Drove 4 bi-weekly Agile/Scrum sprints within a cross-functional team, conducting structured peer code reviews that improved defect detection rates and maintained consistent on-time sprint delivery.

Infosys SpringBoard **Sep 2025 – Nov 2025**
Project Intern *Remote*

- Architected and shipped a production-grade full-stack web application module from scratch, applying SOLID OOP principles, RESTful API design, and a layered architecture to ensure scalability, clean separation of concerns, and long-term maintainability.
- Enforced Git-based version control discipline through feature branching and pull request workflows, executing all 4 Agile SDLC phases — sprint planning, development, testing, and deployment — consistently within deadlines.
- Authored comprehensive unit test suites covering critical execution paths and led systematic debugging sessions, identifying and resolving 15+ software defects to measurably improve module stability and code reliability.

Projects

AI Voice Sales Assistant | *Next.js, MongoDB, AI, Voice Processing* **GitHub**

- Built an AI-powered voice sales assistant enabling end-to-end natural language book discovery and order placement, eliminating manual navigation steps and reducing the average purchase workflow to a single voice command.
- Engineered real-time voice recognition by integrating Web Speech API with custom NLP pipelines, achieving accurate multi-intent classification across search, browse, and checkout flows with sub-second response latency.
- Architected and deployed 8+ scalable RESTful API endpoints with Next.js and MongoDB, powering real-time transactional workflows and an admin dashboard managing 100+ product catalog records via optimized indexed queries.

Distributed File Sharing System | *C, Socket Programming, POSIX Threads, SQLite* **GitHub**

- Engineered a high-concurrency multithreaded client-server file sharing system in C using POSIX threads and raw socket programming, sustaining 20+ simultaneous client sessions with zero data loss under peak load.
- Fortified system security by implementing hashed credential authentication, a 3-tier role-based access control (RBAC) model, and resumable transfer protocols — eliminating unauthorized access vectors and guaranteeing fault-tolerant file delivery.
- Maximized throughput via a pre-allocated thread-pool concurrency model, with SQLite delivering persistent, indexed storage of user credentials, file metadata, and granular access permissions across all role levels.

Technical Skills

Languages: C, C++, Python, HTML, CSS, SQL, JavaScript, TypeScript.
SAP Technologies: SAP ABAP, ABAP on HANA, SAP BTP, CDS Views, AMDP, OData Services, RAP (Basics).
Frameworks & Libraries: MERN Stack (MongoDB, Express.js, React.js, Node.js), Socket.io, Bootstrap, Tailwind CSS.
Developer Tools: Git, GitHub, Eclipse ADT, SAP GUI, Postman, SAP Fiori (Basics).
Analytical & Visualization Tools: Excel, Power BI, Tableau, Google Sheets.

Contributions

- Served as an AI Engineer at Upstride, developing and integrating a CrewAI-based multi-agent AI assistant for a pharmaceutical company's website to automate user support and interactions.
- Solved 260+ Data Structures & Algorithms problems across GeeksforGeeks and LeetCode, focusing on Arrays, Trees, Graphs, Dynamic Programming, and Binary Search.

Leadership / Extracurricular

- Actively lead community service initiatives as Management Head of the National Service Scheme (NSS), coordinating outreach events and managing volunteer teams.
